Gold Coast Company Launches New Water Re-use System

A unique and extraordinarily effective water treatment and recycling system developed by West Burleigh master plumber Kevin Venville has been launched to local authorities, water industry experts and housing developers.

The system, H2O Pure Plus, has been patented and can be installed in domestic, commercial, community, agricultural and industrial applications.

It converts grey and black water to clean potable standard water for internal and external use and delivers water use savings of up to 70%.

Kevin Venville, founder and director of H2O World Wide Water Solutions, says the system is easy to install, is almost maintenance free and makes water re-use easy to achieve.

Kevin said: "H2O Pure Plus has multiple applications. It takes our dirtiest water and makes it clean again.

"It's a get and forget system. We know it will be used throughout Australia, and internationally," Kevin said.

Developed in Queensland the system has been thoroughly and successfully tested at multiple sites over many years.

New modular systems have recently been developed and will be released soon.

The test facility at Maudsland, Queensland has been operating for three years, treating both grey and black water. Cleaned to a "potable" standard a constant flow of recycled grey water goes to the dwelling's three toilets. Cleaned to the same "potable" standard the recycled black water goes to the garden. The recycled grey water is so clean it could also be utilised for the laundry and hot water services, government regulations permitting.

Kevin says that unlike many other water recycling systems, H2O Pure Plus is virtually maintenance free and needs no chemical or mechanical additives.

"H2O Pure Plus is good for the planet - generating clean and healthy water for you and your family, for your garden, for your community, for your farm and for your factory.

"As far as I'm concerned H2O Pure Plus is Right as Rain! "
